Jérémy Dagorn

Senior Staff Software Engineer at Zendesk

Buffalo, USA / jeremy.dagorn@gmail.com / 6193859924

Professional summary

Software Engineer with over a decade of experience in full-stack development, specializing in creating scalable and efficient solutions. Expertise in JavaScript/Typescript, React, Node.js and Ruby/Rails, with a proven track record of leading innovative projects and mentoring teams to enhance technical decision-making.
Proficient with agentic coding as part of my daily workflows (research, planning, implementation).

Employment history

AUG 2021 – PRESENT
BUFFALO, NY (REMOTE)

Senior Staff Software Engineer, Zendesk

Promoted from Staff to Senior Staff in March 2024.

Libretto team member at Zendesk, building the triggers and automation engine used by virtually every Zendesk customer.
I work primarily in Ruby on Rails on the backend, with regular contributions across JavaScript, TypeScript, and React frontend codebases. Since joining the team, I've focused on growing my backend, systems, and product-domain expertise within a highly distributed, customer-critical platform.
I've led the delivery of multiple approvals-related features, partnering closely with engineering, product, and design across teams. My work includes shaping architecture and feature direction through RFCs, technical design documents, and team artifacts, and I've become a key technical resource for approvals-related initiatives across the team.
As one of the most senior engineers on the team, I help drive scoping, alignment, and technical mentoring across our work.
I use agentic coding tools as part of my day-to-day engineering workflow to increase productivity, accelerate experimentation, and explore implementation options more effectively.

MAR 2019 – JUN 2021
SAN DIEGO, CA (REMOTE)

Senior Software Engineer, Robin Healthcare

Early engineer to join the company. Some projects:

- Intake application to make it easy for patients to fill out their intake before their appointments (frontend, backend, data processing, infrastructure)
- Web application to let doctors record clinical summary easily (frontend, backend, data processing, infrastructure)
- Worked on the first iteration of our Authentication/Authorization service (Auth0/Nest.js)
- Tech Lead for the Clinician Mobile App Team (React Native/Expo/Node.js)

Some technologies used:

- Frontend in React/Typescript.
- Backend with Node.js, mostly express/Nestjs for web applications
- Infrastructure with AWS
- Serverless framework

MAR 2018 – MAY 2019
SAN DIEGO, CA (REMOTE)

Senior Full Stack Software Engineer, RollWorks, RollWorks, a division of NextRoll

I was part of the Reporting team for the RollWorks unit. RollWorks is a Growth Platform for B2B marketers looking for precision targeting, account-based marketing, sales-cycle acceleration, and transparent reporting. We are the newest division of AdRoll Group, drawing on 10+ years of performance marketing experience to help marketers grow revenue like never before.

DEC 2016 – MAR 2018
SAN DIEGO, CA

Software Engineer, Ebates

Worked on maintaining and implementing new features for our micro-services in PHP/Laravel. As a member of the Checkout team, I am able to work on many parts of our stack: from creating internal tools using Laravel and Angular.js to helping create our CI process to enable one-click deployments in our QA environment using Jenkins and Docker. I have also contributed in integrating external merchants API into our system.

MAR 2015 – DEC 2016
SAN DIEGO, CA

Software Engineer, Curology

- Enhanced website features with Laravel, boosting system efficiency.

- Integrated APIs for seamless front-end development.
- Built React.js projects from scratch, improving user experience.
- Developed new signup flow using Ember.js, streamlining onboarding.
- Established testing infrastructure, ensuring reliable deployments.

JUL 2012 – NOV 2014

BUDAPEST, HUNGARY

Junior Developer, Prezi

- Developed new prezi editor features using Actionscript and Haxe, enhancing user experience.
- Implemented real-time collaboration for up to 10 users with Java, Haxe, and Python, improving efficiency.
- Worked on complex UI rendering in JavaScript, contributing to a more intuitive interface.
- Conducted data-mining tasks with Hadoop and Pig, providing insights for strategic decisions.

Education

MAR 2011 – MAR 2013

Master's degree, Université Laval

Exchange student for one year

MAR 2010 – MAR 2013

Engineering diploma (equivalent to Master's degree), Polytech Nantes

Computer Science - Software and networks

MAR 2006 – MAR 2010

Licence informatique (equivalent to Bachelor's degree), South Brittany University

Computer Science

Skills

JavaScript, React, Typescript, Nodejs, Ruby/Rails, Python, AWS, DevOps, Agentic coding

Languages

English, French (Native)
